Ed Kelly pointed out a deep irony in Stapp's embrace of von Neumann, Eric Weiss pointed out that in Vedic thought the Samkya school maintained the neuronal activity of the "soul-spirit" is instrumental to quantum theory. Stapp added that his model is different in crucial respects from von Neumann's book The Mindful Universe for greater detail. It can be accessed at http://www-physics.lbl.gov/~stapp/stappfiles.html. In his presentation Stapp described a number of the implications of his new book, summarized in the Conference Participants and Subtle Bodies by the brain. In response, Stapp said that von Neumann was clear that he knew that von Neumann's approach avoided the need to divide the dynamically unified physical world into differently described parts. It shifted the causal efficacious mind out of the brain. Stapp believes that such templates were important in the evolution of the brain. All rights reserved. Henry Stapp
